Demand and Distributed Energy Market Integration (DDEMI) Final Discussion Paper

CALIFORNIA Efficiency + Demand Management COUNCIL

CEDMC Comments

CEDMC DDEMI

- 1. **Applicability**: How many market participants are affected? All else being equal, the more market participants that would benefit by addressing a problem statement, the better.
- 2. **Market Impacts:** How much will the CAISO market benefit from this? Any investment of the CAISO's time and resources should result in more available resources and/or more efficient market operations, both of which will improve CAISO market efficiency.
- 3. **Strategic:** How does this support State goals? Ideally, any problem statements that are addressed should align with State policy goals to the greatest extent possible.
- 4. **Regulatory Alignment**: Does this require coordination with the CPUC? This criterion is less a requirement than a consideration in what time frame would be most appropriate to address the problem statement. For example, the Demand Response rulemaking is currently underway so to the extent that addressing a particular problem statement requires a related policy under CPUC jurisdiction, it might be most efficient for that problem statement to be addressed in the short term.
- **5. Feasibility**: How feasible is this in terms of cost and regulatory hurdles? This criterion is highly important as well because the CAISO's time and resources are finite; selecting high feasibility problem statements will leave resources available to address other problem statements.

Discussion and Questions
